Troubleshooting Guide

If I run into any issues, I will check the following:

1. **Port Conflicts:** If any port is already in use, I will change the port mapping in docker-compose.yml.

2. **Database Connection Issues:** I will check if the database container is running and verify the backend logs:

```
edem@edem-ThinkPad-T450:~/FullStack-ToDo-List-Docker$ docker-compose logs backend
Attaching to fullstack-todo-list-docker_backend_1
backend_1    |
backend_1    | > backend@1.0.0 start
backend_1    | > node index.js
backend_1    |
backend_1    | Server is running on http://localhost:3000
backend_1    | Connected to MongoDB
```

```
edem@edem-ThinkPad-T450:~/FullStack-ToDo-List-Docker$ docker logs mongodb_container
